

We are more than a provider. We are a solution.

DataGear Opens New Depot Repair Facility in Cincinnati Ohio

DataGear, Inc. recently announced the opening of a new depot repair facility in Cincinnati, OH in June 2013. The new facility will provide on-site and depot repair services for customers in the midwest and eastern United States.

LOS ANGELES, CALIFORNIA – JUNE 19, 2013 – For DataGear, an industrial data solutions company specializing in the sales, installation and support of wired and wireless networks, data collection and IP surveillance, the new location means improved repair service, additional support for customers in the eastern US and Canada, and improved turnaround for repairs.

DataGear's new facility is a depot repair center located in Cincinnati, Ohio. "We opened this new location due to the high volume of repair work we do for customers based in the Midwest and eastern United States and Canada. We currently have two *highly* skilled technicians working there, one of which has worked for Psion as a technician for 20 years," said Vice President of Operations, Dave Kennedy.

"We are ecstatic about this expansion and have been fortunate to find such a nice and ideally located space. We wanted to alleviate some of the costs and inconvenience of the shipping distance and time for our customers, while ensuring that they still get the high quality service offered at our California repair facility. Our new location will not only improve operational efficiencies, but it will also assist us in better fulfilling our customer's needs and continue to provide exceptional service and value."

The Cincinnati depot is wholly owned, operated and staffed by DataGear. It is not being subcontracted.

For our east coast and Canada based customers, the new depot is already open for repairs.

The new address is:

DataGear Inc.
7671 Colerain Ave.
Suite E
Cincinnati, OH 45239
